

Compliance Evidence Report

Asgard Cloud Security
Report ID: compliance-20260830T160939Z
Generated: 2026-08-30T16:09:39.358882+00:00

Overall Status	PASS
Control Score	100.0%
Controls Evaluated	4
Passed	4
Failed	0
Requires Review	0

Executive Summary

This compliance evidence report (ID: compliance-20260830T160939Z) presents the results of automated control evaluation across four controls mapped to CIS Controls v8, ISO 27001, NIST CSF 2.0, and PCI DSS 4.0. All four controls evaluated received a PASS status, yielding an overall score of 100.0%. This report provides control evidence at a point in time and does not constitute certification or legal attestation of regulatory compliance.

Overall Assessment

All four evaluated controls passed automated assessment. Evidence confirms the existence and active status of key AWS infrastructure components supporting network protection, threat detection, incident response, and executive governance reporting. No failures or items requiring review were identified in this evaluation cycle. The organization demonstrates a functioning baseline of security controls across the assessed domains.

Framework Scorecards

Framework	Score	Pass	Fail	Review	Status
CIS Controls v8	100.0%	3	0	0	PASS
ISO 27001	100.0%	1	0	0	PASS
NIST CSF 2.0	100.0%	4	0	0	PASS
PCI DSS 4.0	100.0%	1	0	0	PASS

Material Failures

None reported.

Items Requiring Review

None reported.

Recommended Actions

- Expand the control set in future evaluations to include data-plane evidence such as WAF rule configurations, actual blocked or logged request counts, and rule set currency to strengthen the depth of evidence for CTRL-001.
- Supplement CTRL-002 threat correlation evidence with record counts, correlation rule definitions, or sample findings from the 'waf-correlation-findings' table to demonstrate active detection activity rather than infrastructure existence alone.
- Augment CTRL-003 incident response evidence with incident record counts, lifecycle stage data, or response time metrics from the 'security-incidents' table to validate that the response process is actively exercised.
- For CTRL-004, consider including metadata such as report generation frequency, distribution records, or content summaries from the S3 executive reporting prefix to more fully demonstrate governance oversight activity.

- Establish a recurring evaluation cadence to provide evidence of continuous control operation over time, as the current assessment reflects a single point-in-time snapshot.

Control Evaluation Detail

Control	Category	Severity	Status	Observation
CTRL-001 AWS WAF Protection	Network Security	HIGH	PASS	DynamoDB table 'asgard-waf-events' exists with status 'ACTIVE'.
CTRL-002 Threat Correlation	Detection	MEDIUM	PASS	DynamoDB table 'waf-correlation-findings' exists with status 'ACTIVE'.
CTRL-003 Incident Response	Incident Response	HIGH	PASS	DynamoDB table 'security-incidents' exists with status 'ACTIVE'.
CTRL-004 Executive Reporting	Governance	MEDIUM	PASS	S3 prefix 's3://asgard-executive-report/executive-reports' contains report evidence.

Evidence Limitations

- All control evidence is based on the existence and ACTIVE status of AWS resources (DynamoDB tables and an S3 prefix). Existence of infrastructure does not confirm that controls operated continuously, were correctly configured, or produced meaningful security outcomes during the assessment period.
- No data-plane evidence was evaluated, such as WAF log volumes, blocked request counts, correlation rule definitions, incident record contents, or executive report content. Conclusions are limited to infrastructure availability.
- The assessment reflects a single point-in-time evaluation as of 2026-08-30T16:09:39Z. No historical trend data or continuous monitoring evidence is included.
- Control ownership, staffing, process adherence, and manual procedural steps are not evidenced in this report and cannot be inferred from the supplied data.
- This report covers four controls only. The broader control environment, including controls not evaluated here, is outside the scope of this evidence package.

Auditor Note

This report provides automated control evidence collected at a single point in time (2026-08-30T16:09:39Z) and is intended to support audit review. It does not constitute certification of compliance with any regulatory framework or standard. All statuses and scores were determined by automated evaluation prior to report generation and have not been altered. Auditors should note that PASS determinations reflect the presence and active status of named AWS resources and should seek supplementary data-plane and process evidence before drawing conclusions about the effectiveness or continuity of control operation.

This document provides control evidence only. It is not a certification, legal opinion, or guarantee of continuous compliance.
